DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1, part of 7-9 and part of 11-25, drawn to a method of treating inflammation in a subject which comprises administering to the subject soluble receptor for advanced glycation endproduct (sRAGE, SEQ ID NO: 1), classified in class 514, subclass 2.

II. Claims 2, part of 7-9 and part of 11-25, drawn to a method of treating inflammation in a subject which comprises administering to the subject a polypeptide consisting essentially of the V-domain (SEQ ID NO: 2) of receptor for advanced glycation endproduct (RAGE), classified in class 514, subclass 2.

III. Claims 3-6, part of 7-9, 10, part of 11-13 and part of 16-25, drawn to a method of treating inflammation in a subject which comprises administering to the subject an agent in an amount which inhibits the interaction between receptor for advanced glycation endproduct (RAGE) and its ligand, classified in class 514, subclass 2.

The inventions are distinct, each from the other, for the following reasons:

Inventions I - III are independent and distinct, each from the other, because the methods are practiced with materially different process steps for materially different purposes and each method requires a non-coextensive search because of the different modes of operation, process steps and goals.

Art Unit: 1647

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

2. In addition, this application contains claims directed to the following patentably distinct species of the claimed invention:

- (i) arthritis
- (ii) colitis
- (iii) Crohn's disease
- (iv) asthma
- (v) diabetes
- (vi) periodontal disease
- (vii) autoimmune disease
- (viii) autoimmune encephalitis
- (ix) multiple sclerosis
- (x) allergy
- (xi) delayed-type hypersensitivity

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-3 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

is allowable or that all claims are generic is considered non responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement to be traversed (37 CFR 1.143).
